- Turn human review comments into AI-agent fixes -

2026年6月27日

AI can create specs. But feedback breaks the loop

Feedback is trapped outside the coding agent workflow.

Every review comment is secretly an AI task

One human sentence should become a complete, scoped instruction for an AI agent.

But this actually means:

- Update spec
- Update API behavior
- Update pricing rule
- Update screen copy
- Update user flow

Publish specs, collect comments, pull them back as AI-ready context.

CLI-first, local-file-native, AI-readable.

“Now, let me show you the working demo we built with AI.”

Demo: one comment becomes a full fix

DOCKSYNC REVIEW

Docksync Review

Docksync Review spec.html

Artifact preview

spec.html - 1 revision

MVP Review Fixture

Docksync turns review comments into agent context.

Publish a local HTML artifact, collect comments in the browser, and pull them back into a coding agent workflow.

Demo operator note: click the headline, workflow list, or Anchor Rebase section to create a review comment.

Workflow

1. Push a single HTML file.

2. Review the rendered artifact in a sandboxed iframe.

3. Pull open comments into local context.

Anchor Rebase

Existing comments should reattach to matching DOM elements after a safe edit, or become orphaned when the target disappears.

```
1 Comment:
2 Free users should not invite teammates.
3 Related files:
4 - docs/api.md
5 - docs/pricing.md
6 - screens/onboarding.html
7 Instruction for Codex:
8 Make team invitation Pro-only across spec,
9 API, pricing, and screen copy.
```

Target + Related files + Instruction

AI agents join the review workflow, not just code generation.

Before

- × Codex writes files
- × Human copies comments manually
- × Fix scope is unclear
- × Review is outside local workflow

After

- ✓ AI-agent responds to feedback
- ✓ Comments become context
- ✓ Related files are suggested
- ✓ Review returns to local AI workflow

GitHub reviews code.

Notion reviews documents.

DocSync reviews AI-generated specs.

And turns feedback into Codex-ready fixes.

Xin cam on Thank you
